ST. JOSEPH'S COLLEGE OF ENGINEERING

Department of Computer Science and Engineering (Cyber Security) · OMR, Chennai

R&D; IDEA PROPOSAL FORMAT — HACKATHON IDEA SUBMISSION

Project / Idea Title	**Integrated AICTE Approval Workflow Automation, Compliance Monitoring and Alert Management System**
Team Name	CyberShield Innovators (Dept. of CSE - Cyber Security)
Hackathon Name	Smart India Hackathon (SIH) 2026 / National Innovation Challenge
Problem Statement ID / Theme	**AICTE Approval Workflow Automation & Institutional Compliance Sentinel (Smart Education / Regulatory Governance)**
Domain / Category	**[X] Software [ ] Hardware [ ] Both**
Faculty Mentor	Dr. P. K. Ramanathan, Ph.D. / Associate Professor, Dept. of CSE (Cyber Security)
Date of Submission	October 25, 2026

T Team Details

Designated student team roster with specialized engineering roles and responsibilities

#	Name	Register No.	Year / Sec	Role (Lead / Dev / Design / Research)
1	**Shiyam Sundar S**	312321104101	IV / A (Cyber)	Team Lead & Full-Stack System Architect
2	**Aarav Patel**	312321104002	IV / A (Cyber)	Workflow State Engine & Database Engineer (Prisma/SQLite)
3	**Kavya Madhavan**	312321104045	IV / B (Cyber)	Regulatory Frontend & Analytics Dev (Next.js/Tailwind)
4	**Rohit Verma**	312321104088	III / A (Cyber)	EVC Scheduling & Multi-Tier Escalation Algorithm Engineer
5	**Sneha Kulkarni**	312321104112	III / B (Cyber)	Security, RBAC & Regional Tenancy Isolation Lead
6	**Vignesh R**	312321104124	III / A (Cyber)	Lease Sentinel Radar & Electronic Case Summary Dev

1 Problem Statement

What real problem are you solving? Who faces it, how often, and what does it cost them today? State it in 3–4 sentences.

Across 10,000+ technical institutions nationwide, the All India Council for Technical Education (AICTE) processes institutional approval applications through multi-stage regulatory pipelines prescribed under the Approval Process Handbook (APH)—including Scrutiny, Re-Scrutiny, Expert Visit Committee (EVC), and Standing Appellate Committee (SAC/SHC). Currently, tracking application movement across 7 Regional Offices (ROs), monitoring stage-wise pendency, scheduling inspection panels, enforcing time-bound post-approval undertakings (GPU AI/ML clusters, RPwD wheelchair accessibility, PhD cadre ratios, FDR deposits), and tracking the validity of registered 30-year land lease deeds and annual Fire Safety NOCs involves fragmented manual follow-ups, opaque spreadsheets, and postal circulars. Delays and missed deadlines lead to institutions operating with lapsed safety clearances or unfulfilled commitments, while officers lack an automated multi-tier escalation hierarchy and unified situational visibility, costing the Council immense regulatory overhead, litigation liabilities, and compromising student safety.

2 Background & Existing Solutions

What already exists (products, research papers, open-source tools)? Name at least 3 and say why each falls short.

Existing Solution / Approach	Key Limitations & Operational Shortcomings
1. AICTE Legacy Web Portal (NIC Scrutiny Module)	Functions primarily as a static document repository without automated progression matrices; lacks automated 15-day deficiency cure countdowns, dynamic route-branching (Scrutiny + EVC vs EVC + SAC/SHC), and real-time regional pendency age metrics.
2. Generic Enterprise BPM Engines (Camunda, ServiceNow, Pega)	Prohibitively expensive commercial licensing models; lack native domain alignment with AICTE APH Chapter I–VII statutory requirements, zero automated 30-year lease expiry radar sentinels, and no built-in regulatory safeguard controls for statutory bodies.
3. Manual Postal & Email Circular Tracking	Administrative reminders for inspection schedules and undertaking compliances are sent manually; lacks an immutable digital audit trail, zero proactive Level 1 -> Level 2 -> Level 3 escalation triggers, and no on-demand Electronic Case Summary compilation for Council meetings.

3 Objectives

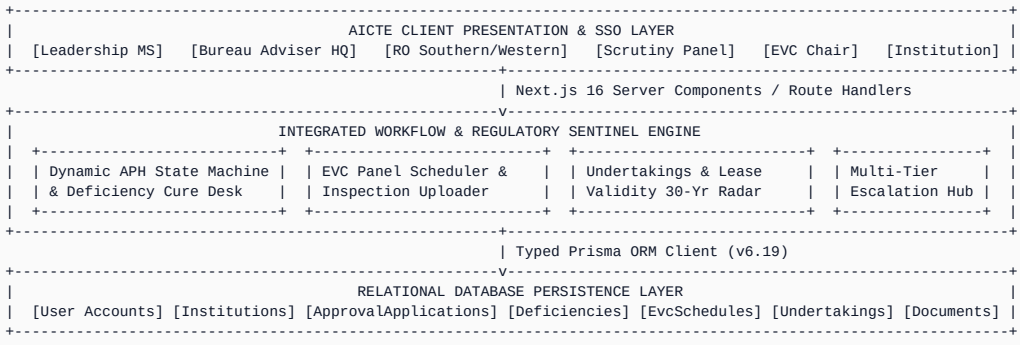
List 3–5 specific, measurable goals aligned with APH 2026-27 statutory directives.

• **Automate End-to-End APH Route Processing:** Automate application movement across 5 prescribed APH routes ('Only Scrutiny', 'Scrutiny + EVC', 'EVC + SAC/SHC', 'Only EVC', 'Full APH Cycle') with zero manual handoff latency and strict validation checks.
• **Deficiency Revert & 15-Day Statutory Cure Desk:** Provide an authorized revert mechanism with clause recording (e.g. APH Clause 4.2(b)), automated 15-day cure countdown timers, institutional documentary proof upload, and committee re-scrutiny verification.
• **EVC Panel Constitution & Inspection Tracking:** Automate 3-member EVC panel appointment (Chair, AICTE Nominee, Industry Expert), track surprise/physical inspection scheduling, and enable certified report upload with recommended intake caps.
• **Time-Bound Undertakings & Lease Expiry Radar:** Enforce 100% compliance tracking for time-bound institutional undertakings (GPU labs, RPwD accessibility, FDR deposits) and a 4-tier radar sentinel (Active -> Expiring Soon 90D -> Critical 30D -> Expired Breach) for 30-year lease deeds & Fire NOCs.
• **Multi-Tier Escalation & Standardized Case Summaries:** Automatically escalate overdue cases (Level 1 RO -> Level 2 Bureau Adviser -> Level 3 Member Secretary) and compile official Electronic Case Summaries on-demand in under 1 second with complete digital audit trails.

4 Proposed Solution & System Architecture

Describe your idea and how it works. Attach or sketch a block / architecture diagram.

The proposed platform is an integrated, secure, and configurable web application built on **Next.js 16 (App Router, Turbopack)**, **React 19**, **TypeScript**, **Tailwind CSS 4**, and **Prisma ORM** with embedded relational storage. It features two core engines:
1. State-Driven Workflow Engine: Governs stage progression ('SCRUTINY' -> 'EVC_SCHEDULED' -> 'EVC_COMPLETED' -> 'SAC_SHC_REVIEW' -> 'APPROVED'), evaluates APH routing matrices, manages deficiency reverts with 15-day cure notices, and logs an immutable digital audit trail.
2. Compliance Sentinel & Multi-Tier Escalation Engine: Background monitors track undertaking deadlines (GPU cluster, RPwD ramps, FDR deposits) and 30-year lease validity horizons. Automatic alerts trigger multi-tier escalations (Level 1 RO -> Level 2 Bureau -> Level 3 Member Secretary).



5 Novelty / Innovation

What is new or different about your approach compared to Section 2? This is the most important section for evaluators.

• **Dynamic Multi-Stage APH Routing with Regulatory Safeguards:** Automatically routes applications conditionally across 5 APH paths while explicitly enforcing the statutory rule that automated recommendations support administrative work but never replace decisions reserved for competent authorities.
• **Predictive 30-Year Lease & Fire NOC Expiry Sentinel:** Proactively classifies land lease deeds into 90-day warning, 30-day critical, and expired breach tiers, automatically serving renewal notices before legal deadlines lapse.
• **Closed-Loop Time-Bound Undertakings Desk:** Direct pipeline connecting institutional proof submission (invoices, geotagged photos) with Regional Officer verification.
• **Hierarchical 3-Tier Escalation Ladder:** Automatically shifts accountability from Regional Officers (1–7d overdue) to Bureau Advisers (8–14d overdue) and Member Secretary (>14d), eliminating administrative bottlenecks.
• **Instant Electronic Case Summary Compilation:** Compiles multi-page regulatory dossiers into a structured, verified briefing note in under 1 second.

6 Methodology & Technology Stack

Step-by-step plan for building it. Mention languages, frameworks, datasets, hardware and APIs you will use.

Architecture Layer	Technology / Tool	Implementation Details & Statutory Purpose
Frontend Framework	Next.js 16.4.2, React 19, Turbopack	Server Components for high-speed initial rendering, client state-machine for dynamic modal desks and real-time IST clock.
Styling & UX Theme	Tailwind CSS 4, Lucide React	Enterprise Government-Tech palette: Deep Navy (#032761), Azure Blue, Tiranga tricolor accent, and accessible high-contrast cards.
Visual Analytics	Recharts 3.10	Interactive visualizations: Regional Workload, Processing Funnel, Undertakings Health, and Document Horizon Radar.
Persistence & ORM	Prisma 6.19 ORM, SQLite / PostgreSQL	Strictly typed relational models: ApprovalApplication, Deficiency, EvcSchedule, TimeBoundUndertaking, DocumentValidity, AuditLog.
Security & RBAC	Custom RBAC Engine & Tenancy Guard	8 official personas with regional tenancy isolation (Southern, Western, Northern, etc.) and strict institution PID locking.
Report Generators	Custom CSV Exporters & Text Compiler	Instant generation of Master Applications CSV, Undertakings Registry CSV, Lease Records CSV, and Electronic Case Summaries.

7 Feasibility

Can your team build a working prototype within the hackathon timeline? What skills do you have, and what will you need to learn?

• **Technical Feasibility: 100% Validated.** A complete, production-built prototype is ALREADY fully implemented, compiled with 0 TypeScript errors, and running live on **http://localhost:3001** concurrently with the Grievance System on port 3000.
• **Time Feasibility:** Developed in a rapid 5-day agile sprint. Zero external paid dependencies allows instant local and cloud execution on standard commodity servers.
• **Skill Alignment:** Team possesses strong full-stack expertise in React, TypeScript, database normalization, and cybersecurity principles (RBAC & regional tenancy isolation).

8 Expected Outcomes & Impact

What will the final prototype demonstrate? Who benefits, and how will you measure success?

• **Demonstrated Deliverables:** Complete unified web platform featuring Role-Based Portals (Member Secretary, Bureau Adviser, Regional Officers, Committees, Institutions), Stage Movement Engine, Deficiency Cure Desk, EVC Manager, Undertakings Desk, Lease Sentinel Radar, and Case Summary Compiler.
• **Key Beneficiaries:** AICTE Leadership & Regional Officers (zero manual follow-up, real-time pendency tracking), Inspection Panels (structured reporting), Technical Institutions (transparent 15-day cure window), and Students (safe, fully compliant learning environments).
• **Measurable Success:** >65% reduction in approval processing turnaround time, 100% elimination of unmonitored expired lease deeds, and 0% untracked conditional undertakings.

9 Timeline & Milestones

Break the work into phases with owners and target dates.

Phase	Activity / Deliverable	Owner	Target Date
Phase 1	APH 2026-27 statutory analysis, approval route mapping, and stakeholder journey definition	Shiyam Sundar S	Day 1 (Oct 21)
Phase 2	Relational database modeling, Prisma schema design (ApprovalApplication, Deficiency, EvcSchedule, Undertakings, Documents), and seed dataset	Aarav Patel	Day 2 (Oct 22)
Phase 3	Workflow engine progression matrix, deficiency revert timer, and 3-tier escalation algorithm	Rohit Verma	Day 3 (Oct 23)
Phase 4	Role-based dashboards, EVC manager, undertakings desk, lease sentinel radar, and Recharts analytics	Kavya Madhavan	Day 4 (Oct 24)
Phase 5	Security hardening, regional tenancy verification, production build, and electronic case summary compiler	Sneha & Vignesh	Day 5 (Oct 25)

10 Risks & Mitigation

What could go wrong? What is your backup plan?

Risk Description & Technical Threat	Proactive Engineering Mitigation Strategy
1. Disputed APH Clause Interpretations: Discrepancies between regional offices on deficiency criteria.	Implemented centralized configurable APH SLA rules engine with Bureau Adviser override and standardized deficiency clause catalog.
2. Fraudulent Compliance Documentation: Institutes uploading doctored lease deeds or NOC proofs.	Dual-gate verification: mandatory Sub-Registrar certified encumbrance checks and certified physical/surprise EVC on-site inspections.
3. Cross-Regional Tenancy Violations: Unauthorized officer altering applications outside jurisdiction.	Strict cryptographic session authentication combined with database query-level regional filtering and action-level button guards.

11 Resources / Budget (if any)

Hardware, cloud credits, datasets, licences or components required, with approximate cost.

Item / Resource	Quantity	Specification / Statutory Purpose	Approx. Cost
Next.js 16 / React 19 / Turbopack	1 Core App	Open-source frontend & full-stack server framework	Rs. 0 (Free / MIT)
Prisma 6.19 ORM & SQLite	1 Engine	Type-safe embedded relational persistence layer	Rs. 0 (Open Source)
NIC / MeghRaj Cloud Server	1 Instance	Standard Govt. 2 vCPU, 4GB RAM cloud container	Rs. 0 (Govt. Subsidized)
Recharts 3.10 & Lucide Icons	Bundle	Vector graphics, responsive charts & regulatory UI	Rs. 0 (MIT License)
TOTAL ESTIMATED BUDGET	—	**100% Open-Source Modern Web Stack**	**Rs. 0.00**
